

Installation Process

Pre-Installation Process

Before installation, Hytoma Automation LLP conducts site inspections, confirms customer requirements, and finalizes the installation schedule in coordination with the customer.

Technicians and Site Requirements

Customers do not need to arrange external technicians for product installation. However, depending on the project, carpenters and local electricians may be required for pre-existing wiring and site preparation.

Installation Timeline

Most installations are completed within 1 to 3 days. If there is no pending work at the site, installations can also be completed on the same day.

System Configuration

After installation, Hytoma performs complete product testing, configures the Smart Home App, connects supported voice assistants such as Alexa, Google Assistant, and Siri, and explains the system operation to customers.

Customer Training

Hytoma provides demonstrations and training to ensure customers are comfortable using their smart home systems.

After-Installation Support

Support services are available after installation to assist customers with any issues or questions.

Quality Control

Every product undergoes quality checks before installation to ensure proper performance and customer satisfaction.

Customer Commitment

Hytoma is committed to delivering professional installation services and maintaining high standards of quality and reliability.
